# MONITOR, MAINTAIN & GEOLOCATE

Installing defibrillators is not enough!
It is vital to map them, maintain them regularly, facilitate and promote their use and train the public to use them.

AEDMAP has developed a smart solution to meet all these needs
Reference

Each defibrillator is registered in the database. This is the first step. It specifies the product number, the installation date, location and availability of each defibrillator.

Geolocate

Once registered, the defibrillator is immediately available online on the map!
Available to the administrator and also to the general public, through the «Staying Alive» App for smartphones.

Manage

An expired pad?
A battery to replace?
A defibrillator that no longer works? AEDMAP Visio alerts the administrator of any need to replace consumables.

Check

Thanks to the AEDMAP Mobile application installed on his smartphone, the technician can update the information live and record all his interventions. The data are integrated and updated in real time in the central database.

Monitor

Integrating a new device, modifying its characteristics, removing a record,...
Through the AEDMAP Visio interface, the administrator can perform all the necessary tasks to maintain his database up to date ... from anywhere. An Internet connection is enough.

Act & Save

With AEDMAP Visio, the database is updated in real time. Defibrillators are all operational and geolocated. In case of a sudden cardiac arrest, everyone can find the nearest defibrillator and save a life.
First responders can be live mapped to improve care efficiency.

With AEDMAP Visio, the database manager has a global and up to date vision of the status of his defibrillators installation in real time...

OPTIONS

Consulting
You want to install defibrillators? AEDMAP can assist you ahead of this approach in writing your specifications and launching the tender.

Inventory & audit
You´ve just signed a contract with AEDMAP. You have a fleet of defibrillators BUT your database is not up to date. AEDMAP proposes to carry out the audit of your fleet. This service includes: the initial inventory, recovery and integration of all data relating to each of the devices in your administration account.

First responders
AEDMAP provides Health Authorities with a complete solution to manage a network of First Responders volunteers: Enrollment, profile management, approval, live mapping, alert notification.
